

SECURITY SOLUTION

Fighting Security Threats with Intelligence

The technology that lets you control which vehicles are both coming, going and remaining on site.

Overview

As a security provider you can provide your clientele with an extensive range of intelligent vehicle management solutions from high security sites, airports, universities to restricted areas.

Video surveillance data can easily be lost amongst hours of footage and the manpower involved in retrieving the data along with low quality images can result in investigations being hampered and/or delayed.

Licence Plate Recognition in combination with real time alerts and integrations into security systems deliver automated instant security alerts and reports 24/7 to any compatible device.

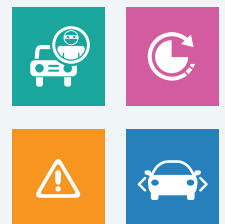

This translates into:

Theft prevention

Real time vehicle tracking statistics

Alerts on vehicles of interest

Accurate logging of vehicle movements

KEY FEATURES

-  Security alerts on vehicles of interest
-  Track vehicle movements around or between sites
-  Alerts on vehicles remaining on site (SOS alerts)
-  Report on vehicle passage times, duration and specific trends
-  24 hour, all weather operation
-  Capture surveillance images with each read
-  Vehicle to driver matching by 3rd party integration
-  Integration into existing security systems

sensor dynamics

SECURITY SOLUTION

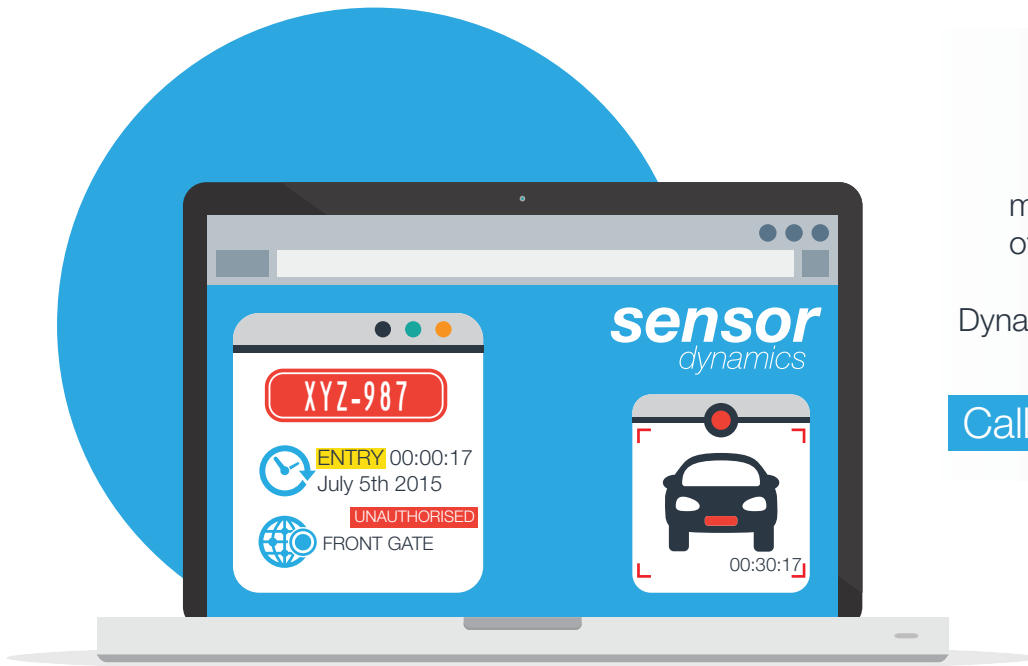

Scan and record vehicle registration, photograph, time, date and GPS coordinates

Data is stored to an SQL database and cross referenced

Operators can quickly verify vehicle details against white/black lists
